GLASS DESIGN **SIDELIGHTS** | PULL HANDLES **MODERN** AND **BETA**
TEMPERED GLASS

Aluminum sidelights

Comfort 73 door with side light

Description

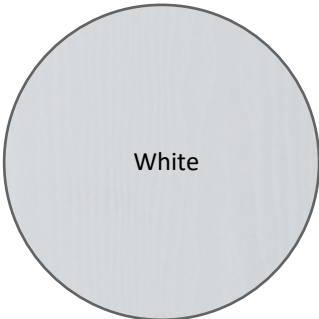

package equipment

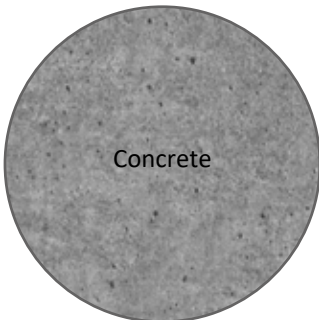

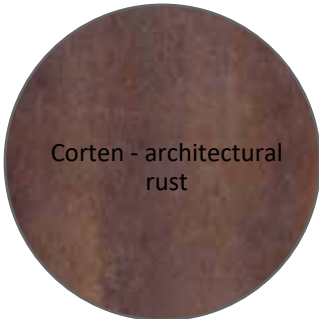

↓	FAST
door leaf thickness	55 mm
fulfillment	Foam PUR
door frame	Thermo
threshold	aluminum
hinges	3D, Φ15 mm
locks	ROTO / independent upper lock
side of the frame (hinges)	adjustment of all locking points
door leaf	four touch points
number of fixing points	12
anti-theft bolts	3 - strengthened

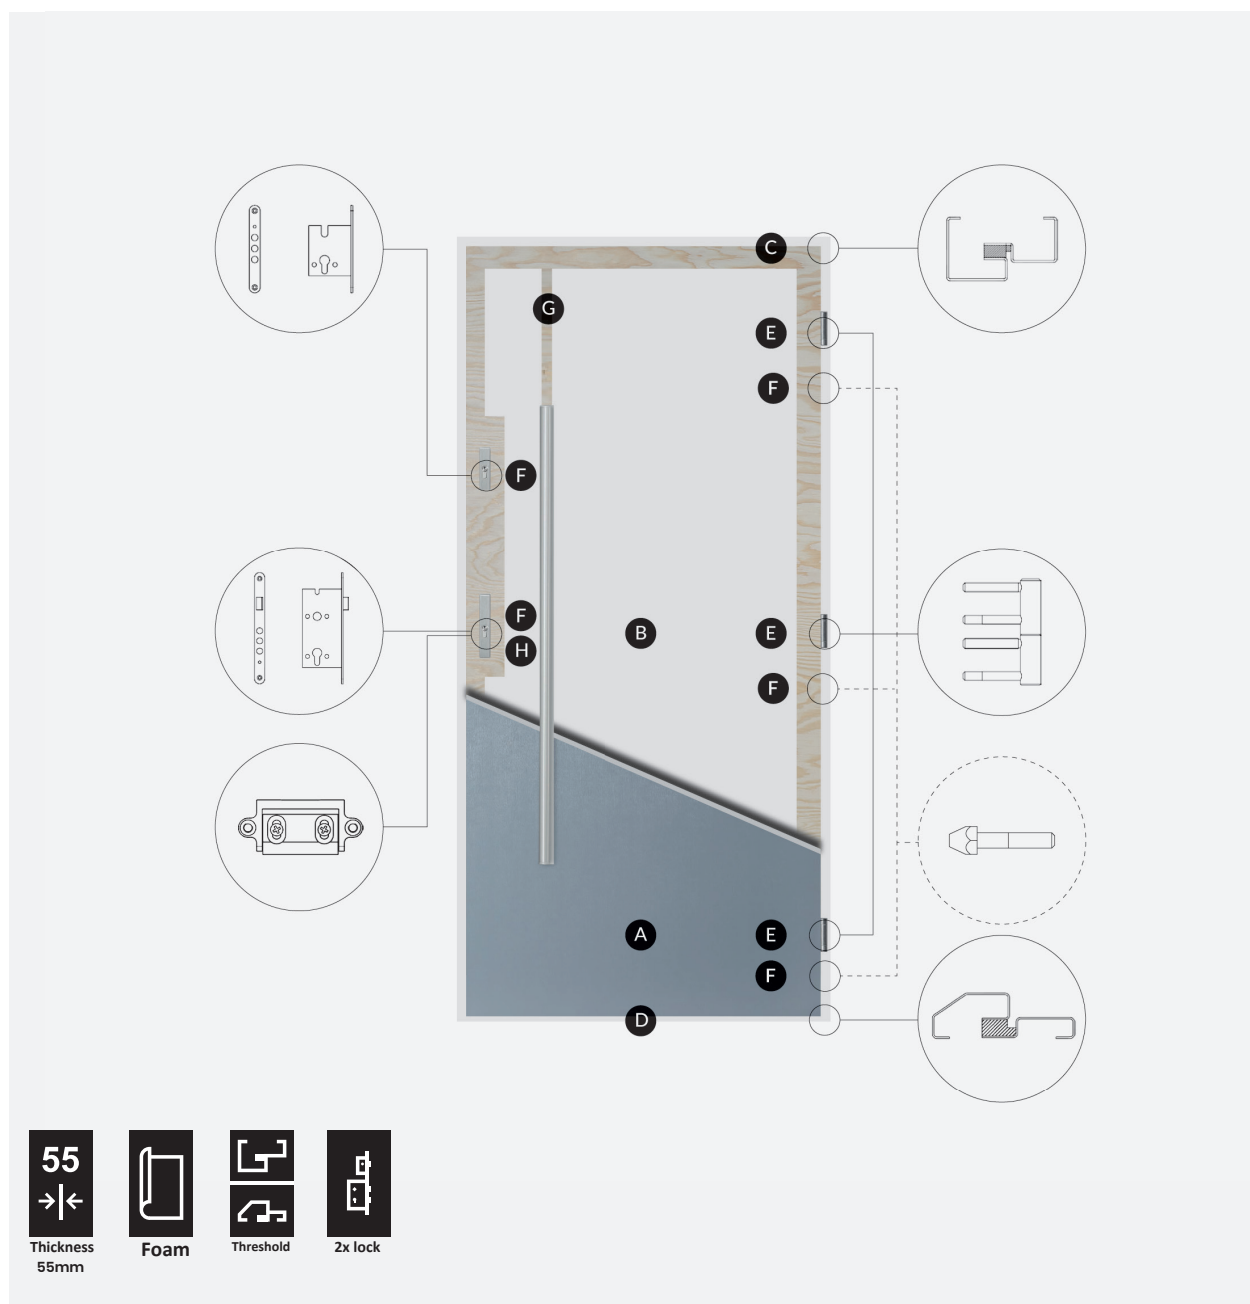

The price of the door in the catalog includes a door leaf, a frame and a threshold. The door leaf is assembled with the frame.

Main colors

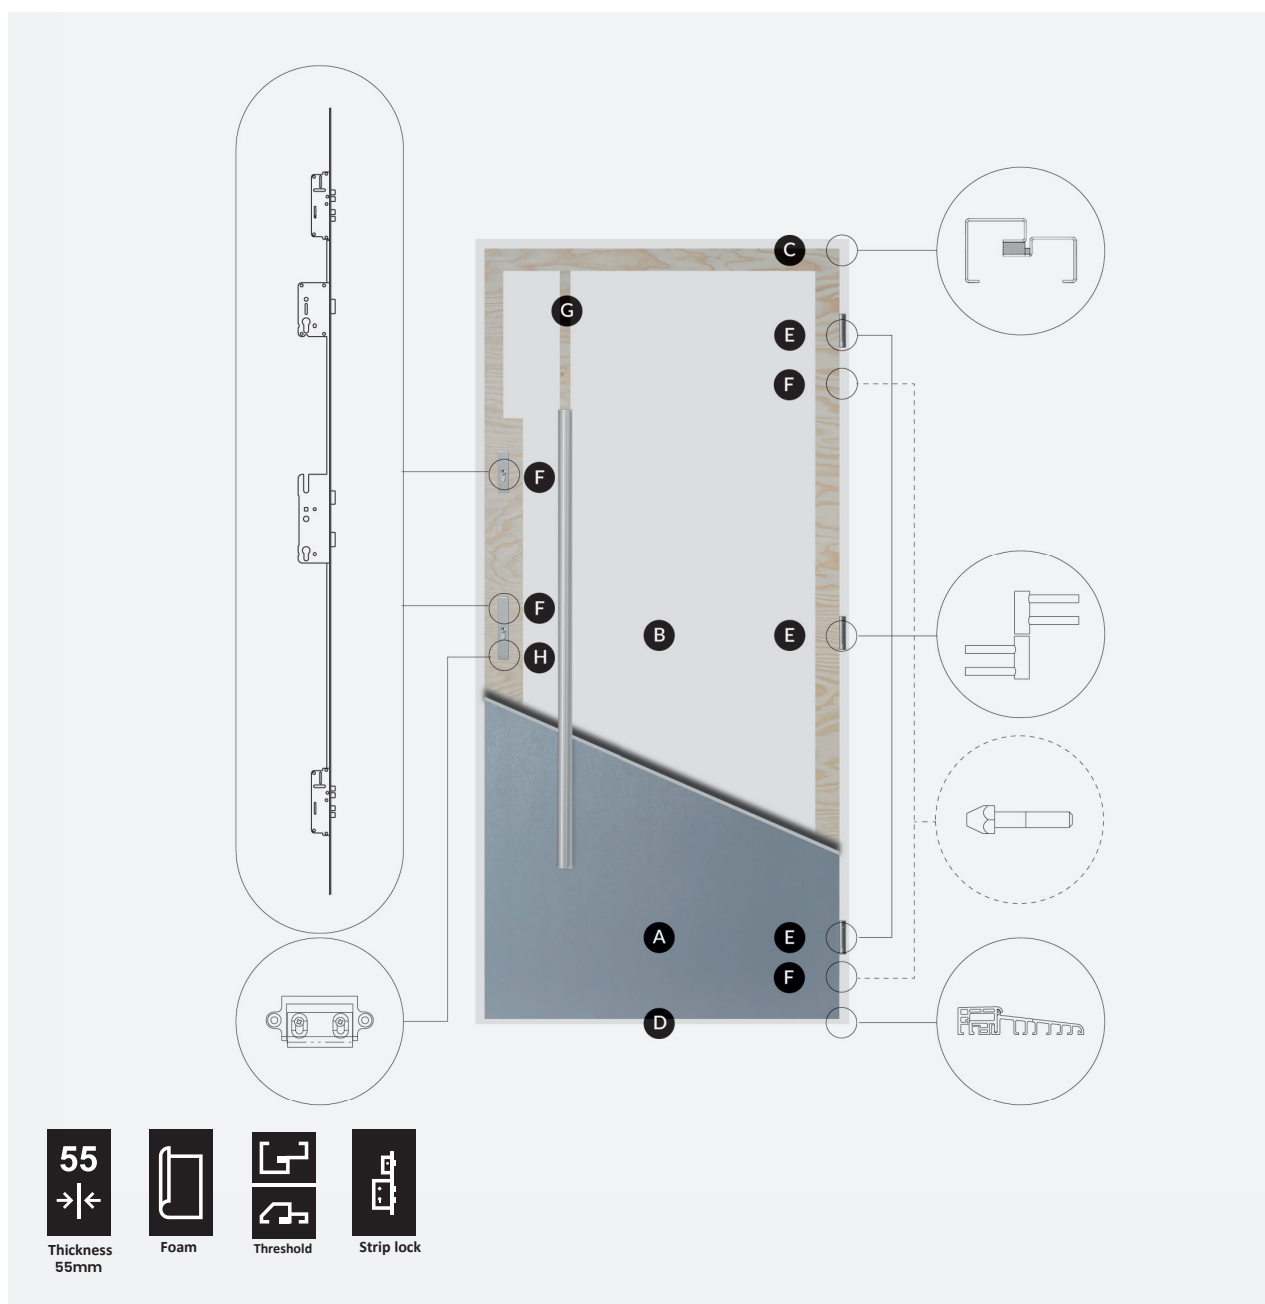

colors at extra charge

cross-section Superior 55 Plus

- A** The sheathing of the door leaf is made of steel sheet protected against corrosion and covered with high-quality foil resistant to UV radiation and weather conditions
- B** The filling of the door leaf is made of injected PUR polyurethane foam that is providing much higher thermal insulation parameters than foamed polystyrene
- C** "thermo" a thermal door frame is a bipartite structure that is separated by a plastic insert - a registered utility design
- D** "Thermo" is a thermal threshold (threshold height is 28.5 mm)
- E** The door is equipped with three 3D hinges with a diameter of 15 mm which greatly facilitate their adjustment and functionality
- F** The door leaf is equipped with two locks with three bolts and three anti-theft bolts
- G** The structure of the door wing is based on a stile made of high-quality, wood-resistant hardwood plywood - this ensures excellent mechanical stability of the door wing in changing weather conditions
- H** Lock adjustment

PRODUCTS

INTELLIGENT SYSTEM

REVOLUTION IN SMART ARCHITECTURE

Remote opening and closing of any chosen passages available thanks to an advanced access management system. Easy to use app, multitude of features, security through encrypted connection, small size, preparedness for expansion and a great price are the many advantages brought by the new era of intelligent houses.

WiSmart devices are compatible with all doors equipped with an electric doorstake or automated locks. It also operates roller shutters, entry gates, garage doors or fences.

FUNCTIONALITY AND LOOKS

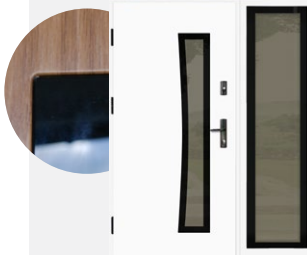

Elegance and security - hinges hidden into the door leaf, a proposal for the demanding customer. Flawless fit of hinge elements with the door leaf and frame conceals the hinge itself. Product dedicated for Termo Prestige Lux doors.

Thanks to its construction, the hinge ensures ease of adjustment and a refined appearance.

GLASS DESIGN SIDELIGHTS

Sidelights dedicated for Glass Design doors, equipped with the same one way mirror Black perfectly fitting the door leaf glazing.

NEW COLOR WOODEC OAK TURNER

Colour Woodec Oak Turner is the beauty inspired by natural oak wood and its unique structure, clearly visible on every door coloured with it. Woodec Oak Turner is an excellent choice for modern architecture and Scandinavian style.

PULL HANDLE MODERN WITH EMBOSING

Classic, eye catching simple shape. Horizontal placement additionally makes the Modern line of pull handles stand out among the others.

Also available with a button.

PULL HANDLE WITH FINGERPRINT READER

Beta 150 cm pull handle now available with a fingerprint reader.

A stylish blend of design and functionality.

POCKET HANDLES WITH A BUTTON

Pocket handles, flush with the door leaf now available with a button.

GLASS DESIGN GLAZING

All Glass Design one way mirrors Black are now unified in one appearance: subtle pattern of dots where opaque meets transparent.

FUTURE INOX IN MIX BICOLOUR

Two separate colour compositions on the inside and outside of Your doors.

TECHNOLOGIES

HINGES WITH ADJUSTMENT UPFRONT

TECHNOLOGICAL ADVANCEMENT DOOR ADJUSTMENT

New hinges in Termo Prestige Lux, Optimum and Premium bring even easier adjustment and ease of access.

Thanks to new technological advancement of the hinges, it is now possible to adjust the door from it's front. Without the need to uninstall the door leaf after the works are finished.

ADDITIONAL PROTECTION IN DOORS WITH PVC FRAMES

EXPANSION TAPE, ADDITIONAL SEALS AND COVERED SCREWS IN PVC FRAMES

Even better door parameters in the same price! Using additional high quality expansion tapes and extra seals around the PVC frame makes it more robust, air and watertight and increases the overall thermal performance. Covers for internal screws additionally minimise any possibility of damage done to the glazing in unforeseen situations.

SIDELIGHT TEMPERED GLASS AS STANDARD

From now on, both external glass panes are always ESG (tempered). Glass tempering causes a difference in tension between outer and inner layers of the pane which in turn allows the for higher durability and safety in unforeseen situations.

FUTURE INOX DETAILS

Future INOX stainless steel elements are now reaching all the way to the end of the door leaf. These aluminium doors achieve even higher degree of refinement.

SHORTENING FUTURE INOX AND GLASS DESIGN DOORS

These new collections can now be shortened by 10 cm from the bottom of the door leaf allowing for even better match with non-standard door opening dimensions without additional modifications.

EXPLORE DOORS

A GOOD DOOR IS NOT JUST MODERN DESIGN. EXPLORE THE TRAITS OF A GOOD DOOR!

DOOR LEAF FILLED WITH PUR FOAM GLUED LAMINATED TIMBER INNER FRAME

The stability and longevity of our doors is not an accident. Above all, it is an appropriately designed construction supported by thought through technological process as well as high quality components.

doors are produced with the use of polyurethane foam by a method of flooding, which consists of filling the inside of the door with a carefully chosen, optimal reagent. Using powerful presses in which the doors remain until the inner space is completely filled and solidified, we produce for You doors fulfilling the highest standards.

Next element that stabilises the construction is a glued laminated timber inner frame additionally strengthened by finger-jointing, which is a construction part of the inside of door leaf. Using PUR foam flooding and glulam frame minimises the possibility of warping, favourably influencing the stability of entire constructions for years to come.

COMPLETE DOORS ADJUSTMENT

Doors are supposed to function for years to come. Therefore, for optimal comfort of use, we must have a full range of adjustment.

3D Hinges. We equip our doors with 3d hinges that allows for smooth adjustment in all three dimensions, ensuring comfortable and easy adjusting without the need of removing the leaf from the door frame.

Espagnolette. Multi-point lock as a uniform and permanently interconnected system. Lock face plate runs the full length of door. This solution adds extra stability and airtightness while also simplifying adjustment possibilities and creating a sublime visual effect.

Lock adjustment. As standard we offer You a system of coupling plates that allows easy adjustments in all bolt locking points. Ensuring an optimal set of adjustments for the current season and Your preferences.

GLAZING WITH WARM EDGE SPACER BARS

As standard, each glazing used in doors is equipped with a warm edge spacer bar in between individual panes of glass substantially improving thermal parameters of the sealed glazing unit. Using such a solution dramatically limits the effect of a heat bridge of glass simultaneously minimising the possibility of condensation gathering on the side parts of the glazing.

CHECK WHAT TO KEEP IN MIND WHILE CHOOSING EXTERIOR DOORS

SUBTHRESHOLD
EXTENSION

In order for Your exterior door to be Your joy for years to come, it should be equipped with a special construction that eliminates any heat-bridges (freezing underneath the door) as well as ensures stability and longevity of the installation.

The element that should be incorporated into each door package is a subthreshold extension. It is mounted underneath the door threshold guaranteeing stable placement of the whole installation. This has a substantial influence on durability and longevity of the installation while also eliminating a heat-bridge effect where inner flooring and outer concrete slab meets. In our offer You will find such extensions made with PVC and Klinaryt (hardened expanded polystyrene).

ADDITIONAL GLAZING:
P4 ANTI-BURGLARY GLASS
AND ONE-WAY MIRROR

One-way mirror glazing allows the best reflection factor from the outside while keeping the visibility from the inside. One-way mirror is available for almost every model of doors.

P4 anti-burglary glass is an option allowing for a very high resistance against burglary attempts while simultaneously keeping the visual aesthetics intact. Glazing set contains 3 glass panes, one of which (P4 glass) is actually two panes, 4 mm thick each, held together by 4 layers of foil.

MAINTANANCE AND USAGE
OF THE DOORS

In order for the INOX stainless steel elements to remain a decoration accessory, it is recommended to regularly conserve them with a cleaning agent dedicated to those types of surfaces (available in our offer). Using the recommended cleaning fluid allows to avoid discolouration and rust stains. Dirt and residue remaining for too long on the surface of stainless steel may lead to rust, corrosion or tarnishing of that surface.

Over time and due to atmospheric conditions protective foil starts vulcanising, making it harder to remove later on. Therefore, after finished installation it should be removed from doors and INOX elements. As part of maintenance doors should be washed with a soft cloth and a neutral washing agent. It will provide durability and appropriate look for long years to come. Details of maintenance can be found in the guarantee card.

DOORS WITHOUT GLAZINGS

ALUMINIUM

DOORS

FUTURE/
INOX

ALUMINIUM
TECHNOLOGY

Metal coat and decorative elements of the Future INOX doors are made entirely out of aluminum.

This allows the doors to achieve a unique durability and very good protection from weather conditions.

Thanks to using the newest technologies, the decorative frames and glazings are connected to the door leaf's metal coat, giving an optical effect of a refined, consistent construction. Placing the perfectly fit glazing into the door leaf is a highlight of the idea accompanying the unique look of the Future INOX doors.

Perfect assembly and subtle underlining of decorative frames give Future INOX doors an unprecedented character.

FUTURE INOX DOORS (FI01, FI02, FI03) CAN BE SHORTENED BY 10CM / 4"
OTHER DESIGNS WITH GLAZING CAN BE SHORTENED AFTER INDIVIDUAL CONSULTATION

FUTURE INOX is a door collection representing a completely unique design.

Subtle decorative frame flush to the door leaf as well as the possibility of mixing and matching two different colors separated from one another are the newest design proposal for doors.

This design solution was unavailable until now for this product type.

DISCOVER A NEW

DIMENSION OF GLASS

GLASS DESIGN

External doors from GLASS DESIGN collection is the newest design proposal where glazing from the outside and frames from the inside are both flush to the door leaf giving an outstanding effect.

New technology used for GLASS DESIGN series allows to mount the glazing without the need of using a glazing frame from the outer side.

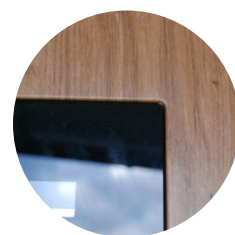

**GLASS REFLEX
TECHNOLOGY**

Glazing used in GLASS DESIGN series have a unique one-way mirror Black of a very high reflection factor. This unique visual effect underlines the extraordinary look of the entire door.

There is a possibility of making other glazing in the passive leaf than listed (only after consultation with the sales department).

Sidelights available only with TERMO frame.

When using TERMO frame it is possible to connect with one-leaf doors, two-leaf doors and doors with passive side panels. Made with warm aluminium TERMO profile. Available in all colours. Every sidelight comes with three glass pane unit. Prices include installation kit.

There is a possibility of manufacturing sidelights and top lights in non-standard dimensions (in between those shown in table below). Cost of sidelight with non-standard dimensions varies.

WORTH KNOWING

It is good to choose the right sidelight as early as during design phase. It will allow to reduce installation costs.

EXTERIOR DOOR WITH PASSIVE PLAIN SIDE LEAF

EXPLORE OPTIONAL ACCESORIES

Doors with passive plain side leaf contain the PREMIUM series standard equipment and are always available with TERMO frames (extra charge to the TERMO frame according to the rates). Passive plain side leaf may be present on one side or both sides of main door leaf. Both TERMO door frame and passive plain side leaf frame are combined in the same way as with sidelights and transoms.

Passive plain side door leaf available in width 30, 40, 50 and 60. Availability depends on door line.

AVAILABILITY OF THE FOLLOWING WIDTHS ONLY FOR PREMIUM LINES.

WAY OF OPENING DOORS WITH PULL-HANDLE

Door opened from outside by pulling the handle

Door opened with a key

Outside

Inside

1

Handle - Pull handle

2

Double-sided Pull-handle

3

Pull-handle - pull handle or both sides pull handle with a door strike (roller latch function)

Roller latch function requires door closer.

4

Handle - Pull handle or both sides pull handle with a door strike

Roller latch function requires door closer. Door strike requires dedicated power supply. Opened with, for example, an intercom.

5

Pull handle with a button (one or both sides)

Door strike is connected to a power supply.

6

Door with automatic opening system

Kit contains fingerprint scanner, contactless system, keypad. Applies only for Termo Prestige Lux. Doors equipped with automatic lock.

7

Pull handle with a button and automatic 3-point-lock system

Button in the grip operates the locks. Available only for Termo Prestige Lux doors.

8

Doors for external control opening

To operate, connect door to an external controller (e.g. WiKeys). Available only for Termo Prestige Lux doors. The doors are equipped with an automatic espagnolette.

9

Automatic doors controlled by a pull handle

Set contains a pull handle with fingerprint reader. Available only for Termo Prestige Lux and Optimum Termo equipped with automatic locks or memory electric strike.
